

Temporary Traffic & Event Management Specialists

Client:

Project:

London Wrap

Contract Value: Approx. £750,000.00

Scope of Works

Between September 2014 and March 2015, RTS project managed the installation of over 35 Clear Channel digital advertising boards. All of the sites are situated in and around London, mainly on major trunk roads and high profile locations, in order to engage with millions of motorists and commuters on a weekly basis.

RTS managed the whole project from the initial survey and council correspondence to arranging the lifting machinery, elevated work platforms and, of course, the traffic management.

Consultation work is something RTS dedicate a lot of time and resources to due to the appeal of having a single contact for all of their traffic management and lifting requirements.

In the last decade RTS have cemented fantastic relationships with sub-contractors, councils and local authorities. This proved invaluable for the *London Wrap* scheme due to the tight timescales in which the signs had to be installed, some of which were carried out under temporary full road closures.
