

## Temporary Traffic & Event Management Specialists

Client:

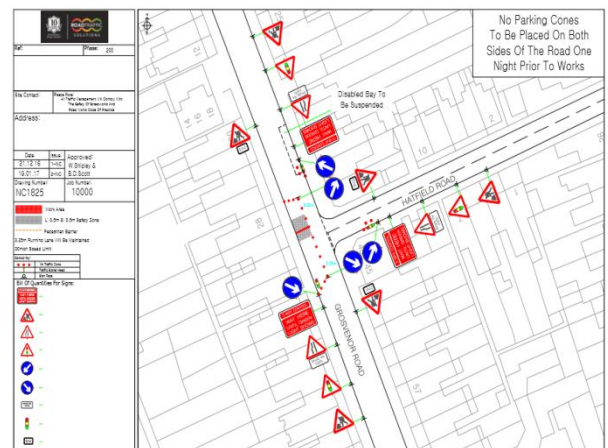

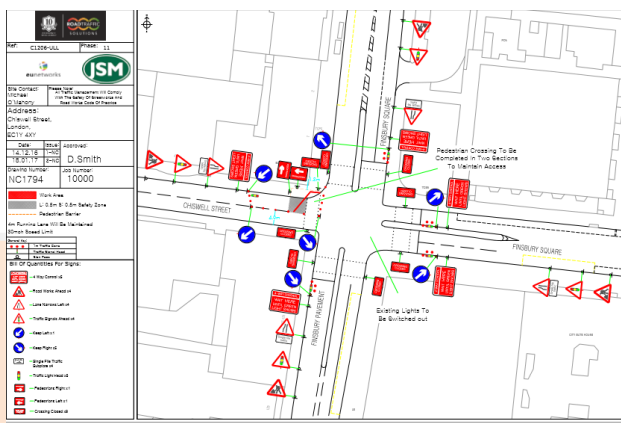

Contract Value: TBC.

### Scope of Works

JSM are undertaking cabling works that span over 40KM for their client.

RTS have provided various Traffic Management scenarios over the years for major routes associated with cable laying. Much of the works for this project is carriageway incurring; this is where RTS step in.

A route of this grandeur requires major planning internally and alongside our client. This scheme of work saw RTS go to site and survey all the carriageway works. Once the information was recorded and surveys produced, this was then inputted into our bespoke system REPS, allowing our CAD technicians to then produce the required traffic management plans.

RTS have now produced over 350 traffic management plans for this scheme of work; all were completed on time and to all parties' satisfaction.

We look forward to implementing the traffic management for this scheme later this year.

*The above project is to begin shortly.*
